

TRAP MODEL

The simple concept our strategy is built on.

A deep dive into the mechanics of price movement, showing how the market induces traders, traps them, then expands in both directions.

UNDERSTANDING THE FRAMEWORK

THE 3 STEP MODEL

Every major move in the market follows the same logic, whether price is headed higher or lower. The logic has three phases, and understanding each one is critical to timing your entries and exits.

First comes inducement. This is where the market lures traders into a position. It could be a slow grind higher, a convincing breakout, or a series of higher highs that looks bullish to anyone watching. Or it could be the opposite—a slow grind lower that looks bearish. The market is baiting traders into what they think is an obvious move.

Then comes the trap. Once enough traders have followed the bait and entered their positions, the market reverses on them. The stops get hit, the position gets liquidated, and the traders who thought they saw an obvious setup end up on the wrong side. This is where the liquidity gets swept.

Finally comes expansion. After the trap closes, price continues in the original direction or the opposite direction, depending on the market's plan. This is where real opportunity lives, but most traders miss it because they got trapped in phase two. This framework works exactly the same whether we're talking about a bullish move or a bearish one. Let's look at both.

Traders who understand this pattern don't get trapped. They wait for it, read it, and enter on the expansion.

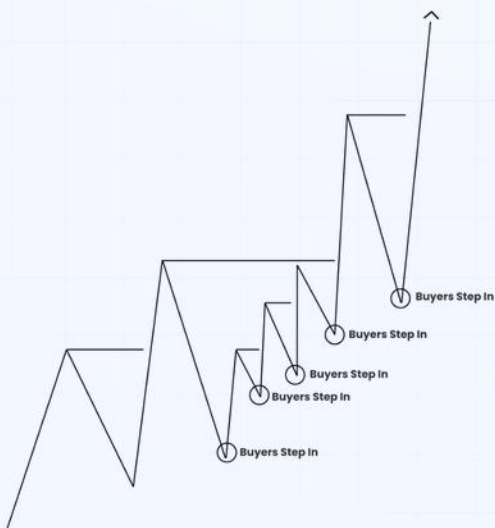

BULLISH SCENARIO

INDUCEMENT: BUYERS LURED IN

The market starts moving higher. It could be a slow grind or a sharp spike, but the logic is always the same: price establishes a clear uptrend. Higher highs, higher lows, every pullback holds, and bulls get more confident with every candle.

The inducement phase is deliberately convincing. The market needs to build liquidity, so it baits as many buyers as possible into positions. During this phase, everything is aligned to convince traders this move is real and it will continue. The more convincing the inducement, the more traders follow, and the more liquidity builds up below the market.

Inducement is successful when traders feel bullish and safe. That is the setup.

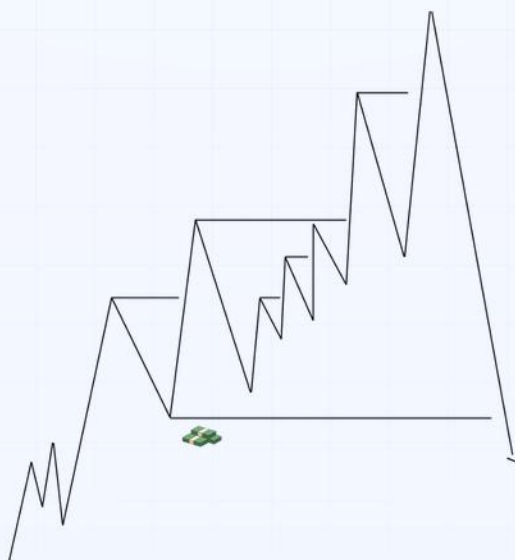

BULLISH SCENARIO

TRAP: BUYERS STOPPED OUT

Once enough liquidity has built below the market, price turns and comes for it. This is the trap.

The market drives down through the structural lows that looked so solid and stops out the buyers. To the traders getting stopped out, it looks like a failed breakout or a reversal. They panic and now add to the selling pressure. The faster the drop, the more they panic. But here's the key: this trap isn't the end of the story. It's the setup for what comes next.

The market has now taken the liquidity on the downside, trapped the wrong traders, and cleared out the weak hands. The stops have been hit and now something changes.

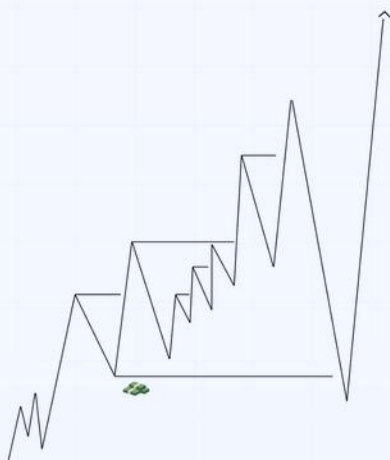

BULLISH SCENARIO

EXPANSION: THE REAL MOVE HIGHER

After the trap closes and the weak hands are shaken out, price turns again and heads back higher. This is the expansion phase. But this time it's different. The traders who entered on the inducement have been liquidated, the stops have been cleared, and the market is now free to run.

The expansion is where the real profit happens. This is where the disciplined traders who waited for the trap to close and the reversal to confirm get to ride the move higher. Price reverses and keeps going. The move up that looked so clear was nothing but the trap followed by the real obvious move back to the upside. The expansion phase continues until new liquidity builds up again and the cycle repeats on a larger timeframe. But for this specific setup, the expansion is where you were supposed to be long.

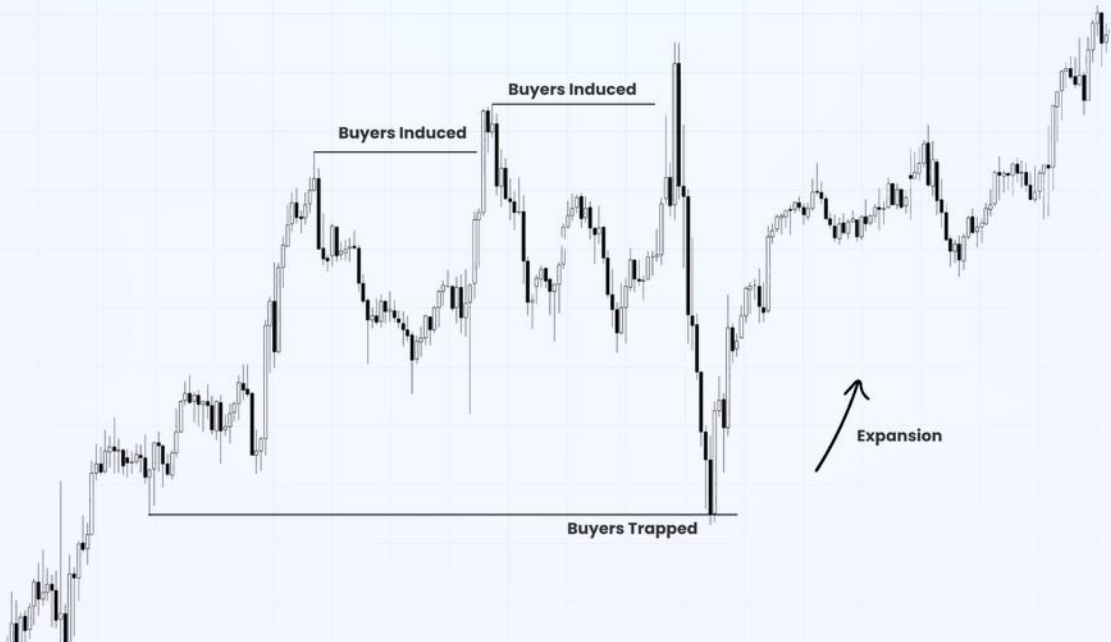

The expansion is the real move. The inducement and trap were just setup.
